Chapter

**Teachers' salaries**

Teachers' salaries represent the largest share of expenditure and investment in formal education and can have a great impact on the structure of the teacher workforce and the quality of teaching. The education sector competes with other sectors for the best-qualified employees. Teachers' salaries may strongly influence graduates' choice to join the teaching profession, and teachers' choice to stay in their job. Attractive teachers' salaries hence help sustain the supply of highly-skilled teachers in the face of an ageing teacher workforce and/or a growing school-age population, and thus ensure that those with the greatest competencies for teaching choose their career path accordingly (OECD, 2016).
